

CS 6603: AI, Ethics, and Society
Final Exam
Frequently Asked Questions

General

1. May I post public questions about the tasks specific to my article or my submission?

No, please make private posts to ask questions. If it is a very general question, then you may create a public post.

If you are mentioning anything about calculations, explanations, etc. related to your submission, make a private post.

If you post such content, it will be reported as Academic misconduct.

2. Is there a page limit for this assignment?

No.

3. What type of files I'm allowed to upload? Can I upload a zip file containing everything?

No, zip files are not allowed. Please upload a single PDF file for your report.

Task 1

1. What are some resources I can use to find an artifact?

Google Scholar (<https://scholar.google.com/>) and the Georgia Tech Library (<https://www.library.gatech.edu/>) are great places to start with!

Before you choose your artifact, please make sure it will provide you with enough data and information to help you answer Task 2, 3, and 4. If your selected article needs more information, look for another artifact.

2. Does the artifact have to fall within the date range provided in the homework instructions? I found a really great article that's off by a month (or any other time period)!

Unfortunately, the artifact does have to fall within the specified date range in the homework document.

But please don't be discouraged! Perhaps, you could use this source as evidence. Try to look for another source that connects to what you found (within the approved date range), and if you're unsuccessful, then try to look for a different source altogether.

3. I noticed that the artifact was *written* outside of the specified date range but was *published* within the date range. Can I still use the article?

Yes! Even if the source was written earlier than the date range specified, if the artifact was accepted and officially published/released during the accepted date range, you may use it!

As an example, let's say the acceptable date range is August 2023 -- December 2023. Artifact X was written by Author Y in January 2022, but officially published in a journal in November 2023. You may indeed use this source as your artifact.

4. If the evidence is within the artifact, may I still use it?

Yes! Please make this clear in submission. You can provide 1-2 (or more if necessary) sentences explaining how the evidence is embedded within your artifact.

5. Am I allowed to have more than one piece of evidence?

Yes, absolutely! While you are required to have a source as a piece of evidence, you may have multiple sources to use as evidence! Please remember to list them in your submission.

Multiple pieces of evidence might prove to be very helpful for Task 3.

6.

Task 2

1. Is there a certain number of keywords or key concepts that I need to be using to complete this task?

No, there isn't a set number of keywords or concepts to add. The goal is for the teaching team to see that you are able to synthesize course material (via lectures, homework, case studies, etc.). Hopefully, you would have gained knowledge to help you identify various types of biases and analyze the impact upon results, the population, etc.

To determine how detailed you need to be, please keep in mind that this is a graduate course.

2. Do I need to bold the keywords and key concepts in my paragraphs?

Yes.

Task 3

1. For this task, do I have to have 6 distinct categories, or can I have multiple examples for a category. For example, I have the Disparate Impact Ratio, Equal Opportunity Difference, and Statistical Parity Difference. Does that count as three metrics?

No. Those three values would fall under the category "Bias and Fairness" metrics – hence, this would be considered as 1 metric. You would need values for 5 other categories.

2. For outcome measures, if I calculate 2 averages and 2 standard deviations, how many metrics does this count for in the report?

1 metric because all the statistics fall under "Outcome Measures".

3. May I copy and paste information from my article and evidence to report the metrics for this task?

No! Do not copy-and-paste information from the article. If you do that, we consider it plagiarism, and it is quite possible you can get a **0 for that Task or the Final Exam.**

If concepts or other text-based data are given in the article, do not copy-and-paste. Synthesize the information with the topics we've learned in class.

If the metrics are given in the article as values, you may screenshot them, but please **explain** the metric, its importance, and its connection to the concepts we've learned in class. There should be a detailed analysis for each explaining the significance of these metrics.

4. Regarding Question 3, does that mean I have to remake the graphs?

No, the graphs are the only pieces of information you make copy and paste into your submission. However, you need to provide an explanation about the graphs and how it relates to the concepts we've learned (i.e., description of the graph, what it means, why it is misleading, etc.).

5. Regarding Question 3, do I need to show proof of my calculations?

No.

6. What if I don't have any misleading graphs? Can I instead explain why the graph is reasonable?

Yes! You can do that! You can also describe how you could make the graph misleading to push a certain narrative.

7. For this task, do I just list out the metrics, and then I am done?

No. For this section, we expect explanation and details for each of the 6 metrics you provide. Some metrics may have more or less details than others.

For example, if you provide a variety of outcome measures or fairness and bias metrics, explain what these measures imply. Does one subgroup have significant differences from other groups? Or are there no noticeable differences?

Task 4

1. What is the best way I can detail this section? Would you prefer a big essay, a table, or something else?

You do have the freedom to detail this section as you wish. That being said, it's always great to format things in a way that is easy for your grader – this is for both you and the teaching team's benefit. This way, the TA can pinpoint each detail when grading against the rubric rather than hunting for the information.

One recommendation is to have these subsections:

- Identified Issue
- Data Inputs

- Data Outputs
- Method (pseudo-code with paragraph summary, a python script with comments, etc.)
- Anticipated Changes in Outcomes

2. If I use a python script, do I need to submit the py file or Jupyter Notebook?

No! Just put a screenshot within your submission.

3. Does my code need to fully work? Do I need to have results to display?

No. The idea is that you will fully explain your methodology on how you would help mitigate bias and/or achieve fairness. However, you do not need to have results on achieving that.
